Equilibrium Global Growth Portfolio

month ended 31 July 2026

equilibrium

Managed portfolio details

Investment manager: **Equilibrium Investment Management**	Platform availability **Momentum Wealth International**	Reporting currency: **USD**
Inception date: **01 January 2019**	Investment timeframe: **7 years +**	Investment manager fee: **0.25%**
Investment target: **Global Cash[1] +5.5%**	Peer group: **Morningstar Aggressive Allocation[2]**	Total investment charges (TIC)[3]: **0.69%**

Investment objective

The portfolio is designed to offer capital appreciation over the longer term through investment primarily in a basket of international equity markets and currencies.

Risk appetite

The portfolio is ideally suited to investors with a high risk tolerance with an investment horizon of 7 years or longer.

Probability of a capital loss or negative return in any 12-month period

Investment policy

The portfolio will invest primarily in participatory interests of collective investment schemes or other similar schemes whose underlying portfolios provide exposure to a diversified portfolio of equity investments across a wide range of markets and sectors globally and across a broad range of currencies over time. A small and restricted exposure to underlying portfolios which invest in asset classes such as cash, money market instruments, fixed income, property and commodities, as well as asset allocation portfolios that provide exposure to a combination of these asset classes, may also, from time to time, be included in the portfolio. All holdings must be approved by the Financial Sector Conduct Authority in South Africa.

Holdings

Holding	Asset type	Weight
Equity		**87.2%**
Robeco Multi-Factor Global Equity [i]	Global equity	29.2%
Evenlode Global Equity [i]	Global equity	11.8%

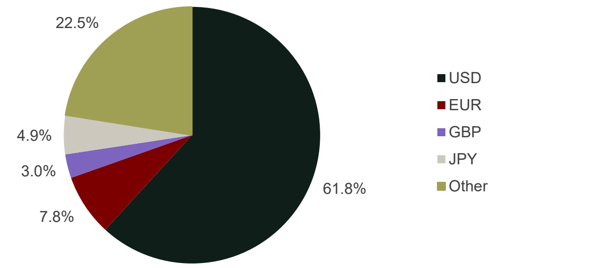
Flex Ltd	1.0%

Data as at 30.06.2026, updated quarterly. The Portfolio is exposed to securities such as stocks and bonds via the underlying collective investment schemes (CISs) in which it invests. The table shows the 10 biggest stock positions the Portfolio is exposed to, and is calculated by aggregating the stocks held by each of the underlying CISs.

Currency allocation



Sources: Momentum Global Investment Management, Morningstar. Past performance is not indicative of future returns. Performance is calculated net of investment management fees.

[1] Global Cash comprises two components: i) prior to 01.01.22, composite of: 50% ICE LIBOR 3M USD; 25% ICE LIBOR 3M EUR; 10% ICE LIBOR 3M GBP; 15% ICE LIBOR 3M JPY; ii) 01.01.22 to present, a composite of the following indices: 50% Bloomberg (BBg) 3M T-Bill Statistic; 25% BBg 3-6M Euro Tsy Bill (France Germany Netherlands); 10% BBg 0-3M Sterling Gilt + Bill Statistic; 15% BBg 1-3M JPY Tsy Bill.

[2] Peer group is Morningstar Global Category: Aggressive Allocation. Filtered for: i) share class = Oldest; ii) registered for sale = South Africa; iii) domicile ≠ South Africa; iv) investment area = Global.

[3] This is an estimated TIC based on the weighted average of the collective Investment schemes (CIS) in which the Portfolio invests. The TIC has been calculated using the latest available data from Morningstar.

[4] Performance figures prior to the inception date of the Portfolio (shown dotted/striped green) correspond to a similar strategy managed by the same investment team since 01.01.2016. This strategy has the same investment objective and investment restrictions as the Portfolio. The Portfolio's live track record began on 01.01.2019 (shown in solid green).

[5] Strategy allocation figures reflect the classification of the CISs (or similar schemes) held by the Portfolio and look through to the underlying holdings of such schemes.

Market commentary

Global equity markets experienced a volatile but ultimately flat month in July. Beneath the headline index level, however, performance dispersion across regions, sectors and investment styles was significant, highlighting a broadening of market leadership after a prolonged period of narrow returns.

Market sentiment continued to be driven by fluctuations in US-Iran geopolitical tensions and the associated implications for inflation. Although US inflation data came in below both expectations and May levels, renewed concerns around higher oil, commodity and shipping costs fuelled expectations of more persistent inflationary pressures. This contributed to a notable rise in global bond yields, with the US 10-year real yield ending the month at 2.4%, while the 30-year real yield rose above 3% for the first time since 2008.

Higher real rates and elevated investor positioning prompted profit-taking across several previously strong market segments. Korean equities were particularly volatile, with the KOSPI experiencing extreme swings amid speculative activity linked to newly approved leveraged single-stock ETFs. Semiconductor stocks also came under pressure, with the Philadelphia Semiconductor Index declining around 20% during the month.

Technology and AI themed shares faced a more challenging backdrop as tighter financial conditions weighed on sentiment. SpaceX shares ended July near US$108, more than 50% below their post-listing peak and below the IPO price. Meanwhile, margin debt in the US reached a record US$1.5 trillion, underscoring the extent of leverage within parts of the market and contributing to heightened volatility. Highly leveraged AI hedge fund, Situational Awareness, was reportedly forced to liquidate positions shortly after month-end, further highlighting these risks.

Fixed income markets also delivered modestly negative returns as rising oil prices and inflation concerns pushed yields higher despite no changes in major central bank policy rates. Corporate bonds benefitted from higher income yields but were unable to fully offset capital losses from rising rates. Currency markets saw notable moves, particularly in the Japanese yen, which strengthened sharply following coordinated intervention efforts aimed at supporting the currency.

While market volatility remains elevated, the continued broadening of equity returns and improving support for quality-oriented investments are constructive developments. We believe a diversified asset allocation combined with active management leaves portfolios well positioned to navigate further uncertainty and capitalise on opportunities created by market dislocations.

Risk warnings and important notes

The launch date is the start date of the portfolio. Returns before this date are back tested using the portfolio's fund holdings and published returns for these as at the date of launch date, which would not reflect Equilibrium's historic asset allocation views, or any changes, which would have been made to the portfolio's holdings over time. From the launch date, returns are based on the published returns for the portfolio's fund holdings and any changes which are made to these. All returns are calculated on a total return basis after the deduction of all fees. Returns for periods exceeding one year are annualised. All returns are quoted in US dollars, unless otherwise stated. Total investment charges (TIC) are the sum of a fund's total expense ratio (TER) and the transaction costs (TC). The portfolio's TIC is an estimated total for the portfolio based on the weighted average of the underlying funds in which the portfolio invests using the latest available data. If a TIC is not available, we may use the TER, which is the TIC excluding transaction costs. Where neither a TIC nor a TER is available, we may use the investment manager's ongoing fee.

The portfolio's asset allocation is based on the weighted average of the underlying funds in which the portfolio invests using the latest available data. The portfolio's asset allocation may differ from time to time due to market movements, changes to the portfolio and the underlying fund data and limitations. The underlying funds will contain exposure to assets that are invested globally, which may present additional risks. The value of an investor's investment and the income arising from it will therefore be subject to exchange rate fluctuations. Foreign securities may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information. The portfolio may also invest in funds which do not permit daily dealing. Investments in such funds will only be realisable on their dealing days. It is not possible to assess the proper market price of these investments, other than on the fund's dealing days. Higher risk investments may be subject to sudden and larger falls in value in comparison to other investments. Higher risk investments include, but are not limited to, investments in smaller companies (even in developed markets), investments in emerging markets or single country debt or equity funds and investments in high yield or non-investment grade debt. Individual investor returns may differ as a result of platform and adviser fees, the actual investment date, cash flows and other transactions.
